# Inventa™ Designed for Integrations

Inventa seamlessly integrates with and leverages traditional DLP, GRC, SIEM, SOAR, and other platforms, delivering a holistic solution that covers all data Security, Privacy, and Compliance needs.

GRC INTEGRATION LEVERAGE

Inventa provides GRC platforms with the following:
- Metadata regarding sensitive data in every on premise or cloud repository
- Reports on changes in environment: new assets, new data entities, new copies, etc.
- DSAR ticketing workflow support.
- Updating newly discovered repositories the GRC inventory tables.
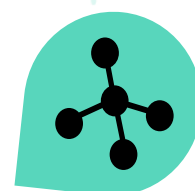

SOAR INTEGRATION LEVERAGE

Inventa provides SOAR platforms with the following:
- Following repository/machine breach– understand what data has been exposed
- Following web server breach – which network elements were exposed to the server
- Understanding which applications communication with what databases.
- Apply security policies on the data asset level.
- Reduce MTTD/MTTR by customizing playbooks to automate response

DLP INTEGRATION LEVERAGE

Inventa provides DLP platforms with the following:
- Enriched information on sensitive data for business-level decision-making
- Accurately detect sensitive data in structured & unstructured files
- Report on data exposed in breached repositories detected by DLP.
- Automatic, continuous discovery replacing directed DLP discovery.
- Data Mapping across all repositories.

SIEM INTEGRATION LEVERAGE

Inventa provides SIEM platforms with the following:
- Alerts regarding new repositories with sensitive content.
- Alerts regarding changes in repositories and sensitive data migration.
- Apply operational policies on the data asset level.
- Insights into metadata and ,repositories via dashboards & reports

CUSTOMIZED INTEGRATIONS

With a flexible, scalable architecture, and a range of tools including REST and STREAMING APIs, Inventa can be adapted to integrate with most 3rd party platforms. Our Professional Services team has experience and know-how in identifying the use cases and data processes needed to support specific customer needs, and will provide end-to-end services to achieve a holistic, integrated solution.

Inventa™ is the Future of Data Aware Security

Inventa is the only data discovery platform that automates the entire discovery process—completely hands free using a network first approach coupled with AI and NLP sensors. With Inventa, sensitive data is discovered and tracked continuously, supporting data classification, lineage identification, and ongoing monitoring of transactions into and out of the organizational network.

DISCOVER
Map all copies of sensitive data & analyze lineage

CATALOG
Create a sensitive data catalog that is updated in near real-time with data-centric information

MONITOR
Monitor network to identify sensitive data transactions

INTEGRATE
integrate with 3rd party platforms to provide a holistic solution based on full data awareness

Discover and map the location of all sensitive data copies in your organizational network

Identify data history for each data subject, and track data transfer into, within, and out of your organizational network
